

Brow lamination pre & post care

PRE CARE

12 months before your appointment

Take your final Roaccutane, Retina, AHA, Glycolic, Doxycyclineskin or similar medication.

6 weeks before your appointment

Refrain from getting sunburn, windburn or a chemical burn (facial).

7 - 10 days before your appointment

- Stop using Retinol skin care.
- Do not receive cosmetic injectable treatment (Botox and filler).

5 days before your appointment

Stop using Glycolic Acid and Lactic Acid.

POST CARE

For 24 hours after your appointment

- Do not get your brows wet for at least 24 hours.
- Avoid any steam, saunas, pools and gyms for 24 hours.
- Avoid any makeup in the brow for 24 hours.
- Leave the conditioning treatment on.

For 3 days after your appointment

Avoid fake tan as it can react with the dye leaving an unwanted tinge around the eyebrow.

Other

- Use the brow oil provided once a day to keep the brows hydrated and prevent them from becoming dry
- Brush brows up and into desired position daily
- Please wait 7-8 weeks before undergoing another lamination treatment, however a hybrid dye treatment can be performed from 3 weeks.
- When washing your hair, apply some conditioner and/or hair treatment on your brows as well! Your brows will thank you for it.

- When lamination grows out, some hairs can look 'kinked'. This is because the regrowth has not been laminated as the hairs were under the skin at the time of treatment. Applying your aftercare oil and a non drying brow gel can help this.

If you have any questions or concerns please do not hesitate to get in touch.
